

Package Deal

Install a Drimaster and Kiwivac central vacuum system for one great price!

We can supply and install both for a much more affordable rate than going through separate providers.

These two systems combined create the ultimate healthy home.

Contact us today for a free, no obligation quote!

"We are amazed at the difference Drimaster has made to our environment. Our windows no longer drip with condensation in the morning, the air seems drier and the house feels warmer. The best part is that our daughter no longer has any signs of asthma."

V Kite, Auckland

"Drimaster works perfectly! Not only does it do exactly what we wanted, but it has also saved us spending big money to achieve the same result."

R & A Godwin, Auckland

"Having evaluated alternative systems, we decided on the Drimaster. Not only for the cost-effective price to supply and install but also for the professional help you provided us – no pressure, just sound advice. My only regret was not having a Drimaster installed years ago."

M Riding, Auckland

How does Drimaster work?

Drimaster works as a 'positive pressure' system, continuously inputting fresh filtered air into your house from outside whilst removing excess moisture from inside.

1. Outside air is drawn into the ceiling space.

2. It is slightly warmed by heat caused from solar radiation and heat loss from the home.

3. This air is drawn into the unit, filtered, then ducted into a central area of the house.

4. This air then mixes with the warmer air that naturally accumulates at ceiling level.

5. Air continuously and gently dilutes, displaces and replaces the air within your home, resulting in a clean and healthy environment.

Why pay more through other providers?

Drimaster can be supplied and installed in an average home for significantly less.

FREQUENTLY ASKED QUESTIONS

What does Drimaster actually do?

Drimaster prevents many of the problems associated with condensation and dampness in your home, such as mould growth on walls, ceilings, furniture, clothes and curtains.

Drimaster also eliminates any musty odours which can result from severe condensation. It purifies the air, resulting in less allergens and providing relief for those suffering from asthma or allergies.

The outcome is a cleaner, drier and healthier living environment.

What difference is there between Drimaster and other leading home ventilation system providers?

Drimaster offers all the same benefits as other positive pressure home ventilation systems in the New Zealand market. However, the difference is the much more affordable price and cheaper on-going running costs.

You can be assured you are purchasing an innovative and quality product, made by a reputable and world-class company with many years' experience in the industry.

How much does it cost to run?

The running costs are minor, especially when you think about all the advantages Drimaster offers. The electrical consumption will be only a few cents a day. Remember the unit is making use of heat in both the ceiling space and at ceiling level that would otherwise be lost.

How easy is Drimaster to use and maintain?

Drimaster is a completely automatic unit, switching to different modes as required to make optimum use of energy. The only maintenance required is the replacement of the filters every five years - many other home ventilation systems require annual filter replacements.

How will Drimaster look in my home?

Drimaster is visually discrete with the only visible component being the central input diffuser which is usually mounted in the central hallway or stairwell ceiling. You have the choice between two types of diffusers, depending on your preference.

Standard Ceiling Diffuser

Slim Line Ceiling Diffuser

Where is Drimaster made?

Drimaster is made in England by Nuaire, the UK market leader in energy-efficient ventilation solutions for both the residential and commercial sectors. Nuaire have been designing and manufacturing ventilation systems since 1963 and are an innovative and world-class company with their products now available in over 40 countries worldwide.
